**RESTRICTION/ELECTION**

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group 1, claims 1- 6, drawn to a process/method for preparing liquid.

Group 11, claims 7-18 drawn to a device for preparing liquid.

The inventions listed as Groups 1 and 11 do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Claim 1, for example, in the Group 1 invention is directed to a process/method which is comprised, interalia, of a combination of steps such as: “ (1.1) distillation and absorption, wherein said distillation means that said material for liquid preparation is heated by a steam with high temperature to release volatile substances and soluble substances when the steam is delivered to a sealed space with an outlet at the bottom thereof and said absorption means that the steam mixing with the volatile substances is forced out from the outlet to be dissolved and absorbed in the liquid; (1.2) immersion, wherein said immersion means that the soluble substances in the step dissolves in the liquid which is pressed into the sealed space through the outlet or a defined inlet due to an air pressure difference created when stopping to deliver the steam with high temperature to the sealed space allows the steam in the sealed space to cool down to water so that an air pressure in the sealed space becomes negative with respect to outside of the sealed space; and (1.3) repetition, wherein said repetition means that the steam is supplied to the sealed space to recover the air pressure therein so as to force the liquid out of the sealed space through the outlet and the step (1.2) and the step (1.3) are repeated according to a specified requirement” whereas, the Group 11 invention is directed to an apparatus including devices such as: a steam generator for generating the steam with high temperature comprising a housing, a heater inside the housing, a water level controller at the upper portion of the housing, a sealing cap for a water fill-in outlet at the top thereof and a pressure valve at the top thereof; a material chamber for holding the material having a sealing top cap, an outlet pipe at the bottom thereof, and a separation web plate; an intermediate switch valve connected between the steam generator and the material chamber, which is used for controlling an entry of the steam with high temperature into the material chamber; and a liquid container for holding the water in which the volatile and soluble substances is dissolved and absorbed, into which the outlet pipe extends”

Applicant is advised that in reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Should applicants traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
